About This Game

A carnivorous worm simulator with an innovative control system and a charming atmosphere full of creepy crawly cannibalism.

- A tactical combat system, allowing worms to tear each other to pieces.
- Elements of the 'Eat or Run' genre: everything in the game is growing, eating or being eaten.
- A control system imitating the movement of reptiles: worms must wriggle to move!

Swallowing all on their path, worms grow and can eat bigger prey, but lose manoeuvrability. The world of Insatia is severe: try to take one bite too many, and you might just end up losing your tail!

The plot takes place within the walls of Professor Pokrovsky's laboratory, where he breeds various kinds of creatures with help from his assistants, Bob and Pinny.

During the game you will be able to control the creatures in the lab during different experiments. Usually you will be a worm, but sometimes you take on the role of the prey...
